TCS Technology Products

Some business challenges exist across industries, particularly those relating to CRM, database integration, knowledge management and other processes that involve huge amounts of data.

TCS' technology products can help you achieve superior operational efficiency and optimize your time, cost and energy investments.

TCS Knowledge Products

Exegenix® Intelligent Document Conversion Solutions®
TCS Digital Certification Services - Public Key Infrastructure - PKI Suite
TCS Certificate Validation Server

TCS Engineering Products

TCS Direct Metal Deposition CAM
TCS Stand Alone Post Processor
TCS SmartBox - Next Generation Industrial Controller Development Framework
TCS Sevak - Self Service Terminals
TCS Rapid Sigma - Six Sigma Solution for Continuous Improvement
TCS Teamcenter for Medical Devices
TCS Enterprise Integration and Control Environment (Certified as "Powered by SAP NetWeaver®.")
TCS Teamcenter for Softlines, Hardlines and Footwear - Retail
VERICUT - Machine Simulation Software
TCS Embedded Code Analyzer (TCS ECA)

TCS Life Sciences & Healthcare Products

Med Mantra - TCS Hospital Management and Information Solution
TCS Clin-e2e - Clinical Trial Management Solution
TCS Silicone Ambulatory ECG Device and Solution
TCS Bio-informatics Solution

TCS Banking & Insurance Products

Tata Accounts Receivable and Billing System (TARABS)
TCS xCOS™ - Accelerated Customer On-Boarding Solution

TCS Telecom Products

TCS' Hosted OSS/BSS Solutions

Tata Consultancy Services' Hosted OSS/BSS (HOBS) - a pre-integrated, pre-modeled solution is a unique amalgamation of Business Process services, IT services, applications & infrastructure to assist all types of service providers at all stages of maturity. A solution based on a open, multi tenanted architecture to drive innovation across every stage of a service provider's lifecycle, HOBS is delivered against committed Business SLAs.

The solution is based on Industry Standards (eTOM, ITIL) and offered as 'Platform-as-a-Service' on 'Build-as-you-Grow' & 'Pay-as-you-Use' commercial models, to ensure low investments and high Return on Investment(ROI). Contained in it is a range of comprehensive market ready solutions such as Customer Relationship Management, Order Management and Provisioning, Revenue management, Enterprise management, Inventory

TCS 2013 TREND STUDY

The Emerging Big Returns on Big Data

management, Network Management which address to the varying intricacies across the retail as well enterprise segments.The offering is a complete pre-integrated and modular solution owned, hosted, and managed by TCS. This allows the Service Provider to concentrate on enhancing customer value and focus on core business growth.

Med Mantra - TCS Hospital Management And Information System

TCS' MedMantra is a new age hospital management solution which is set to transform the hospital management and information solution use in hospitals by shifting the focus from recording healthcare to delivering healthcare. The solution has a patient centric approach with intrinsic EMR, strong clinical focus and a full function ERP making it a comprehensive solution for the hospital.

Med Mantra goes beyond hospital automation to help you achieve Patient Care and Satisfaction, Patient Health Management through EMR, Lower Cost of Operations, Effective Decision Making, Capacity Utilization, Resource Optimization, Physician and Staff Productivity, Integration with External Systems, and Statutory Compliance.

With this product, large and medium-sized hospitals can streamline patient care, hospital administration, ancillary services, and clinical support activities. Your health care institution can realize better administration and control, enhanced fund management, better reporting to aid strategic decision making, and improved patient care and satisfaction.

For more details, read the brochure on Med Mantra - TCS Hospital Management and Information System.

To Top

Tata Accounts Receivable And Billing System (TARABS)

Improving cash flow is critical for every business, as is the need to present accurate, integrated and timely bills to customers and enhance their overall experience. Property and Casualty (P&C) insurance enterprises, such as yours, therefore need a billing and receivable management system that is capable of handling the complex needs of the industry.

TCS offers you Tata Accounts Receivable and Billing System (TARABS). Our solution is equipped with an excellent customer service feature and a premium accounting functionality coupled with the ability to improve the cash flow.

For more details, read Tata Accounts Receivable and Billing System (TARABS).

To Top

TCS Clin-E2e | Clinical Trial Management Solution

This Clinical Trial Management Solution addresses all four phases of clinical trials. A secure online environment captures electronic data and integrates sites and labs with sponsors. Pharmaceutical companies are able to create customized Case Report Forms (CRF) and investigate clinical data more effectively as they successfully monitor progress of global trial sites, reduce time and cost of clinical trials, and ensure regulatory compliance with global frameworks.

To Top

TCS Silicone Ambulatory ECG Device And Solution

For assessing patients quickly and correctly to avert cardiac arrests, TCS Silicone provides real-time monitoring of heart condition via ECG (graphical data in Lead II configuration). The information is then transmitted through any available radio frequency communication channel, enabling doctors to decide the immediate course of action. It also has a built-in feature to send diagnostic alerts to a hospital through a mobile phone interface.

To Top

TCS Bio-Informatics Solution

Address the need for accessible databases and analytical applications that sort and organize the massive amounts of data required in this industry, enabling quick distribution of critical information to researchers. This product assists drug discovery processes from target identification to lead optimization, and addresses four major functional areas: Genomics, Protein Modeling and Structural Analysis, Simulation, and Drug Design. Researchers are assisted by sequence analysis, genome analysis, comparative genomics, 3D modeling, 3D structure manipulations, structural analysis and simulations.

To Top

VERICUT - Machine Simulation Software

TCS' Engineering and Industrial Services group has been promoting **VERICUT** product line in India since 1992.

VERICUT is a CNC Machine simulation software developed by California-based CGTech that enables you to machine parts on the computer before actual cutting occurs. Using VERICUT, manufacturers can verify the accuracy of the program before it is loaded on the machine, reducing or eliminating the need for the time-consuming manual prove-out process and minimizing material costs.

To Top

TCS Stand Alone Post Processor

This highly flexible and customizable solution offers post- processing solutions for various CNC machines and their configurations. It can reduce the post processor development time up to 30-40% depending on the application and can be used for NC applications that are not fully supported by third-party NC post builders.

To Top

TCS Enterprise Integration And Control Environment: Certified As "Powered By SAP NetWeaver®".

This rapid application development framework is used to develop advanced process control and process optimization applications and integrate them with the enterprise applications. This framework gives more than 70% productivity and shortens the development time by at least 60%. Solutions based upon this framework have been deployed at more than 35 plants.

To Top

TCS SmartBox (Next Generation Industrial Controller Development Framework)

Jointly developed by TCS and A*STAR Singapore Institute of Manufacturing Technology (SIMTech), it is a futuristic industrial controller that brings high-level control closer to the actual production process. Its low-cost, open-architecture, which has an in-built Rapid Application Development (RAD) framework, helps Original Equipment Manufacturers (OEMs) create point solutions quickly and with ease.

Its applications include plant-wide control and optimization, replacement of PC-based control applications, connection of plant systems to enterprise applications, control and monitoring of complex plant equipment, distributed control applications, and robotics and precision engineering.

To Top

TCS Sevak - Self Service Terminals

This "self service terminal/kiosk" platform allows customers to pay their bills using cash or credit cards. The terminals can operate in a stand-alone mode or can be connected to back-end servers for live update of transactions. They are typically used by enterprises to automate their manual customer service desks. We can build customized solutions around the Sevak platform.

To Top

TCS Rapid Sigma (Six Sigma Solution For Continuous Improvement)

This is the world's first certified composite on SAP xMII. It helps organizations practicing Six Sigma in reducing the "Time to Measure" of data to nearly zero and also reducing the chances of statistically "unfit" data for analysis. Rapid Sigma is a ready to use, highly configurable tool that gets deployed on SAP xMII environment. This solution allows seamless integration to shop floor databases and SAP ERP. This integration saves the valuable time of data collection and ensures that the right data is collected in the right DMAIC phase from the right place. It cannot be treated as a separate, independent product that runs on its own (it is a composite built using xMII). Also, its functionality needs to be validated by a six sigma black belt champion before being deploying at the customer site.

Med Mantra – A comprehensive hospital management solution

The healthcare industry is facing critical questions today: how can you effectively manage hospitals and provide enhanced services? How can you provide care in a cost-efficient manner? How do you use your resources efficiently to enhance quality of care? While dealing with these challenges, you need to curtail hospital management costs, ensure timely availability of information, improve quality, and extend reach.

Our solution is committed to help you prepare for future challenges. An advanced robust architecture compliant with industry standards, our solution provides investment protection for the future while enabling collaboration and enhancements with ease. The solution has an Electronic Medical Record (EMR) functionality that combines with intuitive diagnostic and prescriptive functionality to enhance physician comfort. In addition, the business analytics functionality provides comprehensive and real time information for better decision making and optimal use of resources. This helps free your resources to be deployed to other priority areas.
